

Renewable and non-renewable electricity

# Solar Panels

Solar power is electricity that is good for the environment, is renewable and will never run out. The pros of solar power is that it puts down electric bills and helps the environment. The cons are they take up a lot of Room and if there is no sun the Solar panels will not work.

# Nuclear power plant

A nuclear power plant might produce power but it also produces harmful gasses that if you inhale them they can kill you and is non-renewable. A nuclear power plant it is reliable and has a small carbon footprint. The cons of the nuclear power plant are there can be lots of accidents.
